

Employee Development Program for Top **MNCs**

Enhancing Skills for
Organizational Success

Presented by
Econstruct Team

www.e-construct.in

Advanced Structural Engineering Corporate Training

Enhance the technical capability of your engineering teams with Econstruct's Employee Development Program (EDP)—a specialized corporate training initiative designed for leading MNCs in construction, infrastructure, real estate, and engineering sectors.

This program bridges the gap between academic learning and real industry practice through hands-on workshops, advanced analysis sessions, and real high-rise project exposure.

Transforming Teams into Industry-Ready Experts.

Program Structure

Our EDP consists of two integrated components:

**3 Day Advanced Structural
Engineering Workshop (Offline)**

**30 Days Online Support (Included
with Workshop – Not Complimentary)**

 **www.e-construct.in**

 **+91 9036744017**

3 Day Advanced Structural Engineering Workshop

A highly immersive offline workshop conducted by senior structural engineers using real high-rise projects, IS/NBC code interpretations, and live analysis demonstrations.

- ✓ Hands-On Training
- ✓ Corporate Level
- ✓ High-Rise Based
- ✓ Project-Driven

Duration

- 3 Days (Full-Day Sessions)

Training Schedule

- Morning: Technical Lectures + Live Demonstrations
- Lunch Break: 1 Hour
- Afternoon: Hands-on Practice + Case Studies

+91 9036744017

www.e-construct.in

Mode of Training

 **Offline Training**

 **Interactive Training**

 **Practical / Live Training**

 **Real Project-Based**

Training Location

-  • **Econstruct Premises**
- **Client's Premises (on request)**

 **www.e-construct.in**

Key Highlights

**Demonstrations
using ETABS,
SAFE & IDEA
StatiCa**

**Real high-rise
RCC & steel
projects**

**Corporate
confidentiality
maintained**

**Hands-on
modelling,
analysis &
design**

**Delivered by
senior industry
experts**

**Digital notes,
design sheets
& code
references**

30 Days Online Support (Included with Workshop)

This 30-day post-workshop support ensures employees implement their learning in real projects with continuous guidance.

Support Includes

- ✓ 2–3 Doubt Clearing Sessions per week
- ✓ Chat-based technical assistance
- ✓ Continuous practice & implementation support
- ✓ Certification guidance
- ✓ Reference materials & solved examples

Mode: Online
(Zoom, Microsoft Teams / Client Platform)

Flexible Weekend Training Designed for MNC Work Schedules

At Econstruct, we understand the importance of maintaining productivity during weekday working hours, especially for MNCs operating with strict project deadlines. To support this, our Employee Development Program is designed with a corporate-friendly weekend training model.

Most companies work from Monday to Friday, so our workshop is planned in a way that minimizes disruption to your ongoing projects:

• How This Benefits Your Company & Employees

Work-friendly scheduling:

Training sessions are conducted on three consecutive Saturdays, ensuring zero impact on weekday project commitments.

Balanced workload:

Employees can focus on their regular tasks during weekdays and upgrade their technical skills on weekends.

Higher efficiency:

Engineers can immediately implement what they learn without affecting ongoing project delivery.

Designed for Corporate Ease:

This structure supports both operational continuity and employee skill advancement.

Training Curriculum (Syllabus)

A complete training framework covering superstructure, substructure, steel structures, and connection design.

ETABS (Super Structure)

Advance Modeling, Analysis
& Design of RCC High-Rise
Buildings

SAFE (Sub-Structure)

Foundation Engineering
– Analysis & Design

STEEL STRUCTURES

Introduction to Steel
Structural Design &
Modelling

IDEA STATICA (Connection Design)

Component-Based
FEM Connection
Design

www.e-construct.in

ETABS (Super Structure)

Advance Modeling, Analysis & Design of RCC High-Rise Buildings

Topic Overview

- Structural Irregularity Checks
- Stiffness Modifiers (IS 16700)
- Drift & Lateral Displacement Checks
- Ductile Detailing (IS 13920)
- Beam–Column–Wall Design & Reinforcement Review
- Drawing Extraction
- High-rise RCC modelling (Residential & Commercial)
- Mivan & Shear Wall Systems
- Flat Slab System Modelling
- Load Combinations & Diaphragm Definition
- Seismic Load Application (IS 1893:2016)
- Wind Load Modelling (IS 875 Part 3)

Detailed Objectives

- Model & analyze high-rise structures using ETABS
- Apply Mivan formwork strategies
- Perform seismic & wind analyses per IS codes
- Conduct irregularity & stability checks
- Review reinforcement & design output
- Extract drawings & schedules from ETABS

SAFE (Sub-Structure)

Advance Modeling, Analysis & Design of RCC High-Rise Buildings

Topic Overview

- Foundation Types: Isolated, Combined, Strap, Raft, Pile, Pile+Raft
- Importing Loads from ETABS
- Soil-Structure Interaction
- Spring Constant Calculations
- SBC/Pile Capacity Interpretation
- Soil Pressure, Shear & Settlement Checks
- Reinforcement Design
- Foundation Drawings Preparation

Detailed Objectives

- Design and analyze various foundation systems
- Apply soil-structure interaction using point springs
- Conduct punching shear and settlement checks
- Prepare reinforcement details and drawings
- Perform complete foundation workflow in SAFE

STEEL STRUCTURES

Introduction to Steel Structural Design & Modelling

Topic Overview

- Steel structural systems
- Member design considerations
- Load combinations
- Connection design basics
- Introduction to IDEA StatiCa

Detailed Objectives

- Understand steel system selection
- Learn beam, column & bracing design principles
- Apply appropriate load combinations
- Review connection forces from ETABS
- Understand basic connection workflows

IDEA STATICA (Connection Design)

Component-Based FEM Connection Design

Topic Overview

- Overview of IDEA StatiCa
- FEM-based connection design
- Understanding connection forces
- Basic connection modelling

Detailed Objectives

- Learn component-based FEM methodology
- Understand connection design requirements
- Model simple steel connections
- Review strength & detailing parameters

Benefits for Your Company

Faster Project Delivery

Well-trained engineers execute modelling & design more efficiently.

Reduced Outsourcing Dependency

Your internal team becomes capable of handling complex high-rise & steel design tasks.

Modern Engineering Readiness

Teams become proficient in advanced tools, systems & methodolog

Improved Structural Accuracy & Safety

Better understanding of codes reduces errors and rework.

Increased Client Satisfaction

High-quality deliverables improve client retention and trust.

Leadership Development within Your Workforce

Engineers gain confidence to take on senior roles.

Strong Cross-Department Collaboration

Smooth coordination between Design, BIM & PMC departments

Benefits for Your Employees

- ✓ Mastery of ETABS, SAFE & IDEA StatiCa
- ✓ Real high-rise project exposure
- ✓ Strong design and analytical skills
- ✓ Better interpretation of IS/NBC codes
- ✓ Improved productivity and documentation skills
- ✓ Confidence in handling complex projects
- ✓ Industry-recognized certification

ECONSTRUCT
DESIGN & BUILD PVT. LTD.

www.e-construct.in

Training Materials and Resources

- Structured Training Manuals
- Software User Guides
- Real High-Rise Project Datasets
- IS Codes & International Standards Reference Pack
- Video Tutorials & Recorded Sessions
- Practical Assignments & Case Studies
- Industry Documentation & Checklists
- Online resources and tools

www.e-construct.in

+91 9036744017

Final Outcome: A Future-Ready Engineering Team

Your Company Gains:

- ✓ Skilled workforce
- ✓ Faster project execution
- ✓ Reduced rework
- ✓ Higher market competitiveness

Your Employees Gain:

- ✓ Real-world expertise
- ✓ Career growth opportunities
- ✓ Improved engineering judgment

Professional Growth Drive

Certificate Sample

After completing the training, we will provide certificates to your employees.

The certificates will include both your company logo and our company logo.
